

Aluminium hydrides and borohydrides as reducing agents

Complex aluminium hydrides and borohydrides as reducing agents¹

The selective reduction of carbonyl groups and similar functionalities is amongst the most common synthetic transformations in organic chemistry.

Complex hydrides of boron and aluminium are very useful nucleophilic reducing reagents to accomplish these transformations for a wide number of substrates and with a broad range of selectivities and reactivities².

The reactivity, and therefore selectivity of the metal hydride is influenced by the following factors:

- Electronegativity of the central metal ($\text{Al} < \text{B}$)
- Lewis acidity of the counter ion
- Electron donating groups on the central metal
- Steric demand of both the reagent and the substrate
- Intrinsic polarity (electrophilicity) of the reducible functional group

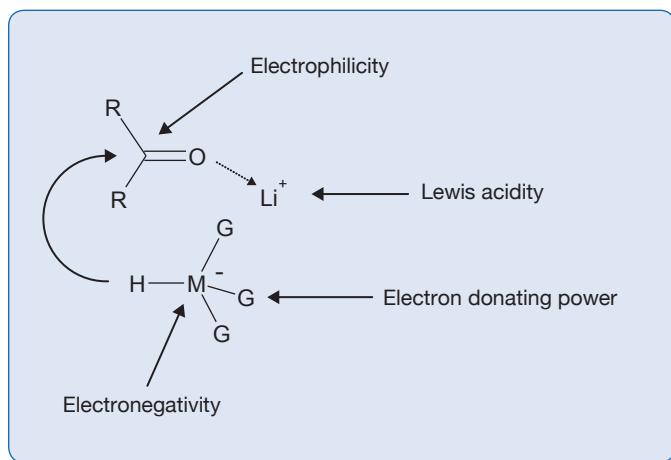

Figure 1 Factors affecting reactivity

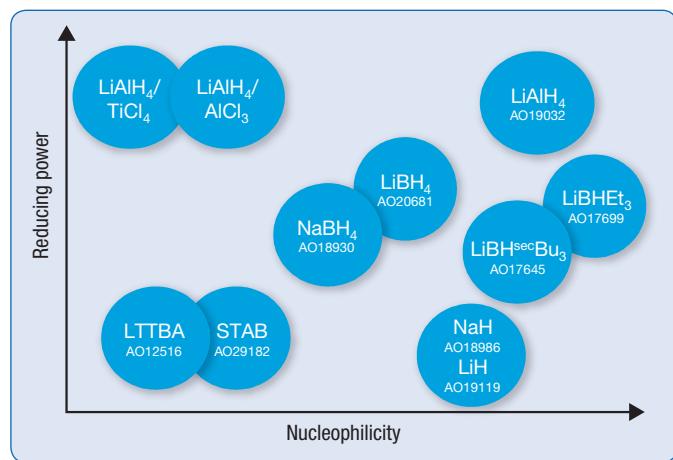

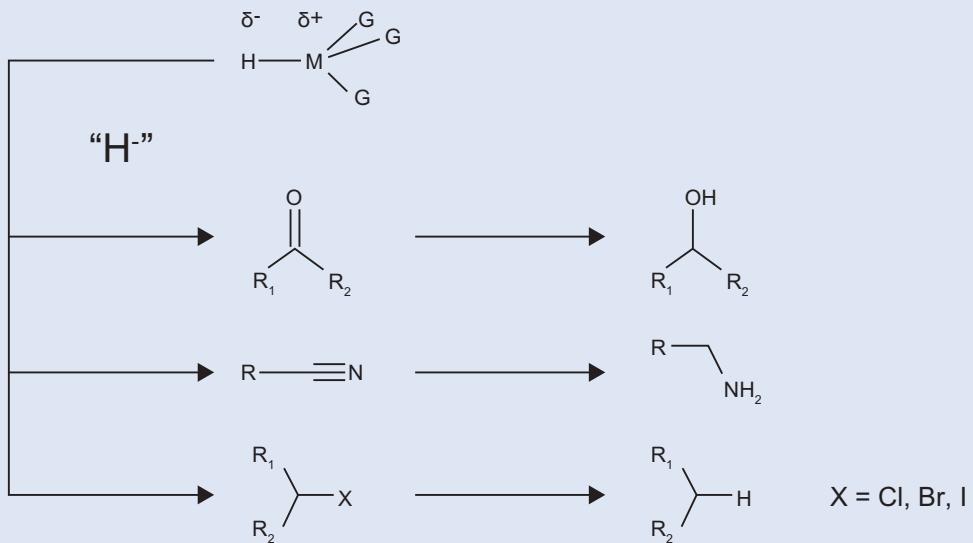

Figure 2 Reactivity “tuning” with complex metal hydrides

The lower electronegativity of aluminium results in an increased electron density and therefore nucleophilicity of the hydride. The lithium cation is better able to act as a Lewis acid than sodium when interacting with a carbonyl oxygen. This induces a stronger polarity in the carbonyl group, enhancing the electrophilicity of the carbon. Both of these factors combine to make lithium aluminium hydride a more powerful reducing agent than sodium borohydride. Reactivity can be “tuned” further by altering the electron-donating and steric nature of the other groups bonded to the central metal (see Figure 2).

The general reaction mechanism may be viewed as a nucleophilic attack of a hydride ion at a suitable functional group, as sketched in the following scheme:

Product Code Aluminium and Boron hydride compounds					
AC376370050	Acros Organics	Benzyltriphenylphosphonium borohydride, 95%	5GR	18117-29-8	
AC190320100			10GR		
AC190320250	Acros Organics	Lithium aluminium hydride, 95%, powder	25GR	16853-85-3	
AC190321000			100GR		
AC190325000			500GR		
AC304530250	Acros Organics	Lithium aluminium hydride, 95%, tablets (ca. 0.6 g)	25GR	16853-85-3	
AC304531000			100GR		
AC332100100	Acros Organics	Lithium aluminium hydride, 95%, in resealable tin cans	10GR	16853-85-3	
AC332101000			100GR		
AC199511000	Acros Organics	Lithium aluminium hydride, 4.0M solution in diethyl ether, AcroSeal®	100ML	16853-85-3	
AC199518000			800ML		
AC377321000	Acros Organics	Lithium aluminium hydride, 2.4M solution in THF, AcroSeal®	100ML	16853-85-3	
AC377328000			800ML		
AC199491000	Acros Organics	Lithium aluminium hydride, 1M solution in THF, AcroSeal®	100ML	16853-85-3	
AC199498000			800ML		
AC385571000	Acros Organics	Lithium aluminium hydride, 15% (3.5M) solution in toluene/THF, AcroSeal®	100ML	16853-85-3	
AC385578000			800ML
