

Boronic acids

A major role in modern chemistry is played by organoboron compounds, among which boronic acids have emerged in a leading position. With the discovery of a wealth of new chemistry, in particular the Suzuki-Miyaura cross-coupling reaction, together with their accessibility and ease of handling, boronic acids and boronates are now established as intermediates of great value and versatility. Applications abound in synthesis, catalysis, analytical chemistry and biological systems. Boronic acids and their derivatives are among the most useful classes of organoboron molecules. Unlike many organometallic derivatives and most organoboranes, boronic acids are usually stable to air and moisture, and are of relatively low toxicity and environmental impact.

With a recently expanded range of well over 2500 boronic acids, esters, organotrifluoroborates and organotetrafluoroborates, Alfa Aesar, now part of Thermo Fisher Scientific, can provide outstanding synthetic and analytical expertise in these products. Some of this extensive range of boronic acids and their derivatives are listed here along with useful reagents and catalysts for reactions involving boronic acids. They are available from stock in catalog sizes and many are available in bulk from stock.

Alkenylboronic acids and esters

H53227

trans-β-Styrylboronic acid, 97%
[6783-05-7]

H33367

trans-2-Ethoxyethenyl-1-boronic acid pinacol ester, 98%
[1201905-61-4]

L19579

3,3-Diethoxy-trans-1-propenylboronic acid pinacol ester, 97%
[153737-25-8]

H27749

(E)-1-Pentenylboronic acid pinacol ester, 98%
[161395-96-6]

H52634

trans-1-Octenyl boronic acid, 98%
[42599-16-6]

L19701

5-Phenyl-1-pentenylboronic acid pinacol ester, 96%
[154820-97-0]
